Project Design Phase-I
Proposed Solution Template

Date	01 March 2026
Team ID	699d5f7bfdf409fdbd1bebf5
Project Name	ResearchHub AI: Intelligent Research Paper Management and Analysis System using Agentic AI
Maximum Marks	4 Marks

Proposed Solution Template:

Project team shall fill the following information in proposed solution template.

S.No.	Parameter	Description
1	**Problem Statement (Problem to be solved)**	Researchers face significant difficulty managing the rapidly growing number of academic publications. Literature review requires searching across multiple platforms, downloading and organizing papers manually, and reading large volumes of research content. This process is time-consuming, inefficient, and increases the risk of missing important research insights.
2	**Idea / Solution description**	ResearchHub AI is an intelligent research paper management and analysis platform powered by Agentic AI. The system allows researchers to search academic databases, organize papers into project-based workspaces, and interact with an AI-powered research assistant. The AI analyzes multiple research papers using Retrieval Augmented Generation (RAG) and provides contextual summaries, comparisons, and insights, significantly reducing literature review time.
3	**Novelty / Uniqueness**	The uniqueness of ResearchHub AI lies in combining research paper management with Agentic AI capabilities. Unlike traditional tools that only store citations or documents, the system provides intelligent contextual analysis across multiple research papers. The platform maintains workspace-specific memory, enabling AI to understand the user's research context and generate insights tailored to their research project.
4	**Social Impact / Customer Satisfaction**	The solution helps researchers, students, and academic institutions improve research productivity and reduce the time required for literature review. By enabling faster access to knowledge and insights, the platform promotes innovation, supports academic research, and helps researchers stay updated with the latest scientific advancements.
5	**Business Model (Revenue Model)**	The platform follows a Software-as-a-Service (SaaS) model. Basic features such as paper search and limited AI queries are available in the free version. Premium subscription plans provide advanced AI analysis, unlimited workspaces, collaborative research tools, and enhanced research recommendations. Institutions and research labs can also subscribe to enterprise plans.
6	**Scalability of the Solution**	The system is designed using cloud-based architecture and scalable technologies such as FastAPI, vector databases, and AI APIs. This allows the platform to support thousands of concurrent users and large volumes of research papers. The modular architecture also allows future expansion with features like research collaboration tools, automated literature review generation, and intelligent research recommendations.
